

EDITORIAL

This issue of the Journal closes the year 2015, in a quarter full of international events that have affected our society and humanity of the Mediterranean.

A first event, known to all, regards terrorist acts in Paris, who offended the land where they were born the ideals of liberty, equality and fraternity. We, in particular, that we are proud to be friends with many colleagues at the University of Paris and many French people, we are gathered in an international network (Resau Psychanalyse du Rorschach).

These events show that the unconscious psychic processes are the foundation of destruction and violence. It does not seem fair to compare, as done by some media, these episodes to the madness, because madness has roots deep in clinical trials pain that we observe and try to reduce.

We can, however, observe that these facts have relational dynamics that are rooted in psychological distress that Clinical Psychology has the task of reducing, taking an interest in health. The health is not just that of a single person or a small group, but that of an entire humanity, for which we are also sad facing the loss of young lives (one of them was Italian and was preparing to scientific research).

Colleagues of Paris our solidarity and the renewal of our friendship, based on values of life science research, education and friendships.

The second event that would seem strange to mention a Journal MJCP is the opening of the Jubilee Year of mercy proclaimed by Pope Francesco; this term, mercy, only apparently is the sole religious.

The reference, must make us reflect how spirituality, transcendence, look for the last man, it is an integral part of the personality, as is widely emphasized by CG Jung. The feeling of transcendence, even independently of faith, the man improves and increases your health.

With this reflection, also on behalf of the entire editorial staff of MJCP, I wish you good health in 2016, good scientific production, transmission and teaching of accomplishment of the purpose of our Clinical Psychology.

Salvatore Settineri Editor in Chief
